5.15 SPECTRA-SB — Spectra Series Switchboards (group-mounted Class 1; plug-in Spectra distribution panels)

FAM-GEA-013 · switchboard · aka Spectra Series Switchboard, Spectra switchboard, Spectra Series Plug-in Switchboards, SWPS Pro-Stock · markings: GE, ABB

GE Spectra Series group-mounted switchboards (Plainville CT) use Spectra plug-in distribution panel interiors in which branch breakers mount on AMC plug-in modules; fusible branch units can be field-substituted with circuit breaker units. Pro-Stock program numbers SWPS<amps><M|L|D><C|A><T|B>N1[EPM] (DEA-623). Spectra panelboard renewal parts tables list switchboard section widths 35/40/45 in alongside panel box widths 27-31/36-40/44 in (APP fillers, FE covers), indicating shared hardware.

OEM part number	TK102PD1A	**A**	S200 Rev 9/12 p.3-123; oem_spec
Description	Plug-in mounting base assembly, horizontal studs, stud configuration SOS (PD1 unit) for K1200 1000 A 2-pole breakers. Each plug-in mounting base assembly includes all mounting hardware, studs and male or female connectors for attachment to one end of breaker; 2 required per breaker. PD1 and PD2 units have different stud lengths to give electrical spacing between adjacent breakers (SLS unit adjacent to LSL unit). 'D' = horizontal studs; substitute 'C' for vertical studs.	**A**	same as above
Application	Optional mounting plate TMP4; mounting screw kit for MOM/TDR handle (343L564 series) needed when used with motor operator or TDR handle	**A**	S198, S200 6-105; 6-99; oem_spec

OEM part number	SGPC2	**A**	S198, S200 Rev 1/19 p.6-105; Rev 9/12 p.3-123; oem_spec
Description	Plug-in mounting base for Spectra SG frame, SG400 3-pole, vertical studs only (LSL); vertical studs only for SG600 frame. Each plug-in mounting base assembly includes all mounting hardware, studs and male or female connectors for attachment to one end of breaker; 2 required per breaker. PD1 and PD2 units have different stud lengths to give electrical spacing between adjacent breakers (SLS unit adjacent to LSL unit). 'D' = horizontal studs; substitute 'C' for vertical studs.	**A**	same as above
Breaker compatibility	SG400 3-pole, vertical studs only (LSL)	**A**	same as above

6.1 MURRAY — Murray / Crouse-Hinds panelboards and loadcenters (pre-Siemens)

FAM-SIE-012 · loadcenter · aka Murray MP, MP-HT, Crouse-Hinds MP · markings: Murray, Crouse-Hinds, Siemens Murray

Murray (and Crouse-Hinds-branded) panels are primarily residential/light-commercial loadcenters; lineage passed to Siemens (code SIE). Commercial three-phase Murray panelboards were not found in this batch; surplus listings show only loadcenter mains (MEQ9985, MEQ9683R, MD200-H) and a motor-control ground bar LX074M.

FAM-SIE-007 · panelboard · aka F1, FPP (10in), S4, SPP, Sentron SPP shallow · markings: Siemens

Siemens 10in-deep distribution (power) panelboard. Branch circuit breakers mount in unit space on 'Connecting Strap Kits' (S* series, e.g. SBL, SE6, SQR, SF6, SJ1, SL6) supplied without breaker; fusible branches use F6xx kits. Same strap kit family serves Type S4 and Sentron SPP shallow panels.

6.9 PUSHMATIC — Bulldog / ITE Pushmatic panelboards and Electri-Centers (incl. 3-phase versions)

FAM-SIE-011 · panelboard · aka Bulldog Pushmatic, Electra-Center, Electri-Center, Pushmatic · markings: Bull Dog, Bulldog, Electri-Center, Gould ITE, ITE Pushmatic, Pushmatic, Siemens

Bulldog Pushmatic panels use push-button (not toggle) bolt-on breakers, grease-lubricated mechanisms reported to stiffen if not exercised, thermal plus (in at least some versions) magnetic trip. Brand passed to ITE/Gould and then Siemens. Replacement 1-2 pole breakers exist (Connecticut Electric UBIP); 3-phase Pushmatic panelboards exist but replacement 3-pole breakers are scarce. Condensed-space P1515 dual breakers do not fit older ITE Pushmatic panels.

Revised P1 250A OEM chassis, 18 circuit, Cu 1-ph bus

OEM part number	K-11-D-2550-01	**A**	S269 pp. 2-3; oem_spec
Description	Revised P1 OEM chassis (bus interior) 18 circuit Cu 1-ph; neutrals NOT provided; deadfront by customer; will NOT directly replace Original P1 chassis	**A**	same as above
Voltage rating	240 V max with BL/HBL/BLH/BLE/BLF branches; 480Y/277 V max with BQD branches	**A**	same as above
Current rating	Tested to 250 A in minimum enclosure 20 in W x 5.75 in D x 26 in H, Cu or Al bus	**A**	same as above
Dimensions	Chassis length L = 9 in (18 ckt); dimension A 5 in; 12.63 in typical at main and subfeed ends; 1.57 in between panel bus and base; 4.37 in to back of deadfront; breaker cut-outs 2.156 / 2.313 in	**A**	same as above
OEM instruction document	Siemens instruction sheet 11-A-1117-01 Rev. 01: 250A OEM Chassis Instructions (Revised P1)	**A**	same as above
Interrupting ratings	200 kA max or lowest rated device; 22 kA if interior has subfeed/feed-through lugs and no protective device	**A**	S269 pp. 2-3; oem_spec

OEM part number	K-11-D-2552-05	A	S269 pp. 2-3; oem_spec
Description	Revised P1 OEM chassis (bus interior) 66 circuit Cu 3-ph; neutrals NOT provided; deadfront by customer; will NOT directly replace Original P1 chassis	A	same as above
Voltage rating	240 V max with BL/HBL/BLH/BLE/BLF branches; 480Y/277 V max with BQD branches	A	same as above
Current rating	Tested to 250 A in minimum enclosure 20 in W x 5.75 in D x 26 in H, Cu or Al bus	A	same as above
Dimensions	Chassis length L = 33 in (66 ckt); dimension A 17 in; 12.63 in typical at main and subfeed ends; 1.57 in between panel bus and base; 4.37 in to back of deadfront; breaker cut-outs 2.156 / 2.313 in	A	same as above
OEM instruction document	Siemens instruction sheet 11-A-1117-01 Rev. 01: 250A OEM Chassis Instructions (Revised P1)	A	same as above
Interrupting ratings	200 kA max or lowest rated device; 22 kA if interior has subfeed/feed-through lugs and no protective device	A	S269 pp. 2-3; oem_spec
Cross-links	Families: RP1

6.11 S1/S2 — Type S1 / S2 lighting panelboards

FAM-SIE-003 · panelboard · aka S1, S2, Sentron S1, Sentron S2 · markings: Siemens

Earlier Siemens (Sentron-era) bolt-on lighting panelboards preceding P1/P2. SpeedFax states that all original P1 kits for 250A-and-below panels work in 250A-max S1/S2 panels; 400/600A S1/S2 use the SMBK* strap kits. Revised P1 kits will not work in S1/S2.

Legacy distribution panelboard and switchboard lines served by the Series 6 connecting strap kits (6E62, 6F62, 6JJ62, 6LL61...) and 6FPB blank plates. 2005 Siemens price list states these kits fit 'switchboards manufactured since 1974'. Equipment lineage (ITE/Gould-ITE/Siemens-Allis) for each type not confirmed in OEM documents in this batch.

Evidence record for existing CDP6 family: dealer kits 5EH2 (EE/EH/EF/HE twin), 5FJ2 (FJ3 twin) and 5JJ2 (JD3/JJ3/JL3/HJ3 twin) list panel type 'FC20 VB'; CDPFJ3, 6CLJ6 and NEB65K list 'FC1, FCII, SB1-3, CDP-5, CDP-6, S5, P5'. The 1990 NEC committee roster shows 'I-T-E Elec. Prod. Div. of Siemens-Allis Inc.'

7.1 BDP — FPE BDP distribution panelboard (double-hole bus)

FAM-FPE-002 · panelboard · aka BDP Spectra bolt-on (as listed by Superbreakers - likely erroneous), BDP panel board · markings: FPE, Federal Pacific

FPE BDP is a distribution panelboard with a 'double hole bus' (Superbreakers) using twin bus-connection kits KBDP1C-KBDP5C per breaker frame. Breaker King sells PCS aftermarket assemblies NEF3K/NEJ3K/NJL3K replacing KBDP1C/KBDP2C/KBDP4C. Superbreakers labels KBDP1C as 240 V 100 A for 'BDP Spectra Bolt-on' panelboards - the 'Spectra' wording appears to be a listing error (Spectra is a GE name).

7.2 CDP — FPE CDP distribution panelboard (single-hole bus)

FAM-FPE-001 · panelboard · aka CDP panel board, CDP panelboard, NHDP · markings: American (ACBC), FPE, Federal Pacific

FPE CDP is a commercial/industrial distribution panelboard using a 'single hole bus' (per Superbreakers description) onto which pairs of N-frame bolt-on molded-case breakers are mounted with OEM bus connection ('link') kits KCDP1C through KCDP5C, one kit per breaker frame family. Each kit (per Breaker King) includes screws, brackets and a deadfront cover plate and mounts two breakers (twin). Aftermarket equivalents NEF1K, NEJ1K, NFJ1K, NJL1K are cross-referenced to the OEM kits. NN-frame switches (e.g., NN633120NA) are also described as fitting CDP panelboards.

Evidence record: 1962 FPE advertisement - NHDP and CDP distribution panelboards with individually lockable rotary-handle breakers 15-800 A, all-steel front panel, individually grounded cover plates.

7.3 FDP — FPE FDP fusible distribution panelboard / QMQB switchboard

FAM-FPE-003 · panelboard · aka QMQB panelboard, QMQB switchboard, Federal Pacific QMQB · markings: Federal Pacific, American

FDP is FPE's fusible distribution panelboard family built around QMQB bolt-on fusible switch units ('used for QMQB and FDP style panel boards and switchgear distribution systems'). Switch units connect to the vertical bus through KFDP-series link/strap kits (KFDP2C, 3C, 4C (200 A), 46C (400 A), 66C (600 A), 7C (1200 A), plus D/S/V variants KFDPD16C, KFDPS16C, KFDPD26C, KFDPS26C, KFDPV7C) and KQB-series kits (KQB3C 15-100 A, KQB4C, KQB46C, KQB66C, KQB86C 700-800 A).

7.4 NA1B — FPE NA1B / NH1B lighting and appliance panelboards

FAM-FPE-005 · panelboard · aka NA-type panel, NAB, NAIB, NH-type panel, NH1B, NHB, NHIB · markings: Federal Noark, Federal Pacific, Stab-Lok

NA1B ('NAIB') and NH1B ('NHIB') are FPE lighting/appliance panelboard types. A used kit KCDP-1A is labelled 'For NE/NEF frame circuit breakers, for NH1B/NA1B type panels, for (2) 3 pole breakers'. relectric lists NAIB-NEF 'NE/NEF twin kit for NA1B panel' and Superbreakers lists KNA1B1C lug kit. fpeparts.com lists 'NAIB panel board kit' and 'NHIB panel board kit'. By analogy with FPE breaker naming (NA=Stab-Lok 120/240 plug-in; NE/NEF=bolt-on 240/480 V) NA1B is likely the 120/240 or 208Y/120 panel and NH1B the 480Y/277 panel, but this is unverified.

7.5 NBLP — FPE NBLP / NQLP bolt-on lighting panelboards

FAM-FPE-006 · panelboard · aka NQLP, NB panelboard · markings: Federal Pacific, Federal Pioneer (Canada)

NBLP panelboards take NB-type bolt-on Stab-Lok-style breakers (Schneider FAQ snippet; Superbreakers NB100 'installs into Federal Pacific NB and NBLP panelboards'). NQ breakers are described as fitting NBLP and NQLP panelboards. Federal Pioneer (Canadian FPE subsidiary, sold to Schneider Canada in 1988) used the same Stab-Lok NB/NBLP nomenclature; that lineage is coded SQD in this catalogue.

FAM-FPE-007 · switchboard · aka Federal Pacific switchgear, Fusematic, HCB, VCB · markings: American, FPE, Federal Pacific

FPE switchboards used N-frame bolt-on breakers (NJL 'designed for direct installation into legacy Federal Pacific switchboards and panelboards that accept N-frame bolt-on breakers'), larger NM (400-800 A with trip units NM031400/500/600/800, lugs NM34/NM36/NM38) and NP frames (to 1600 A), and the Fusematic line (XF breakers, XJL current limiters). Group-mounting hardware for switchboards not identified beyond the panelboard KCDP/KBDP kits.

Evidence record: 1962 FPE advertisement - 600 V AC switchboards types HCB (main distributor sections through 2000 A, small buildings) and VCB (through 6000 A, medium-to-large buildings); branch rotary-handle breakers through 800 A.

8.1 ZIN-DIST — Zinsco / Sylvania distribution panelboards and QSF fusible switch panelboards (double-slot / single-slot split bus)

FAM-ZIN-002 · panelboard · aka QSF panelboard, Sylvania S-line panelboard, double slot, single slot split buss · markings: Zinsco, Sylvania, GTE Sylvania

Zinsco/Sylvania commercial distribution panelboards used two bus/kit styles: 'Double Slot' (Zinsco kits QSF100DS-QSF600DS and DSL* breaker kits) and 'Single Slot ... Split Buss' (Sylvania QSF100SB/200SB/400SB). DSL kits exist for FPE frames (DSLNET, DSLNEJT, DSLNFT, DSLNJT, DSLNM) supporting a forum report that FPE breakers were used in Zinsco/Sylvania equipment above 240 V; Sylvania also lists FPENEFT 'twin mounting hardware for NEF breaker'. Sylvania-branded SEH/SF/SJK bolt-on breakers are sold as fitting Sylvania, Challenger and Zinsco panelboards.

8.2 ZIN-Q — Zinsco / Sylvania Q-type plug-in panels and lighting panelboards (Magnatrip)

FAM-ZIN-001 · panelboard · aka ML12, MLB20, MOB20, MT12MBB, MTMB20, Magnatrip, Q-frame · markings: Challenger (Zinsco-frame), GTE Sylvania Zinsco, GTE-Sylvania, Kearney (look-alike), Magnatrip, Sylvania, Zinsco

Zinsco (and Sylvania-labelled) panels use breakers with deep slots that clip onto flat on-edge bus bars; plug-in Q/QC/R38 branch breakers and QFP/QFL/QFB main breakers. Commercial versions with 3-phase 240 V and bolt-on QB/QCB breakers exist (QB243040 'for obsolete Zinsco commercial and industrial panelboards'). Known failure mode: loosened breaker-bus contact on aluminium bus causing arcing/fusing. Aftermarket: Connecticut Electric UBIZ breakers (10 kAIC) and UBIZRBK12 125 A replacement bus kit.

9.2 FA — Frank Adam Electric panelboards

FAM-OTH-001 · panelboard · aka Frank Adams, FAM, PULFUZSW, KLAMPSWFUZ · markings: Frank Adam, Frank Adam Electric Co., FA

Frank Adam Electric Co. (St. Louis) made panelboards, fused switches and breakers from c.1900; its west-coast branch became Zinsco. Labels include PULFUZSW and KLAMPSWFUZ fused main panels and Fuselok switches. InspectAPedia reports some Frank Adam panelboards used Zinsco-type QSF units. A surplus 'FAM CU-NFJ hardware kit' suggests late Frank Adam panelboards accepted FPE NFJ breakers (unverified).
