1 How to Use This Catalogue

The catalogue is organised by **manufacturer lineage**, then **equipment family** (panelboard, switchboard or loadcenter series), then **component type**. Every hardware item has a permanent catalogue identifier of the form **EDH-<MFR>-nnnnn**.

To identify an unknown part: (1) establish the manufacturer and equipment family from the enclosure nameplate, interior label or breaker type; (2) use Section 2 to decide the component type from its function and mounting style; (3) look up any stamped number in the Part-Number Index (partial numbers are listed in normalised alphanumeric order); (4) if no number is legible, use the Breaker Compatibility Index and the identification-feature table to narrow candidates, then compare dimensions and hole patterns against the part entry.

Claims, not records, carry confidence. Each line in a part entry shows the evidence class of that specific statement and the sources supporting it (S-numbers link to the Source Register in Appendix B). A part may have an OEM-verified part number (A) and only a tentative breaker compatibility (C).

Class	Meaning	Typical evidence
A	**OEM Verified**	Explicitly documented in a manufacturer catalogue, instruction leaflet, drawing or bulletin (page cited).
B	**Strongly Corroborated**	Multiple independent credible sources agree (e.g. two distributors plus a photo of the label).
C	**Tentative**	Single non-OEM source, or plausible but incomplete evidence. Distributor compatibility claims are never above C on their own.
D	**Unverified**	Lead, hearsay or inference requiring investigation.

Evidence basis codes

Code	Meaning
oem_spec	Manufacturer specification text or table
oem_drawing	Manufacturer drawing
distributor	Distributor catalogue / listing
surplus_listing	Surplus / used-equipment listing
photo	Photograph of an actual part or label
field_measurement	Measured from a physical sample (record instrument and date)
inference	Engineering inference — never sufficient for compatibility

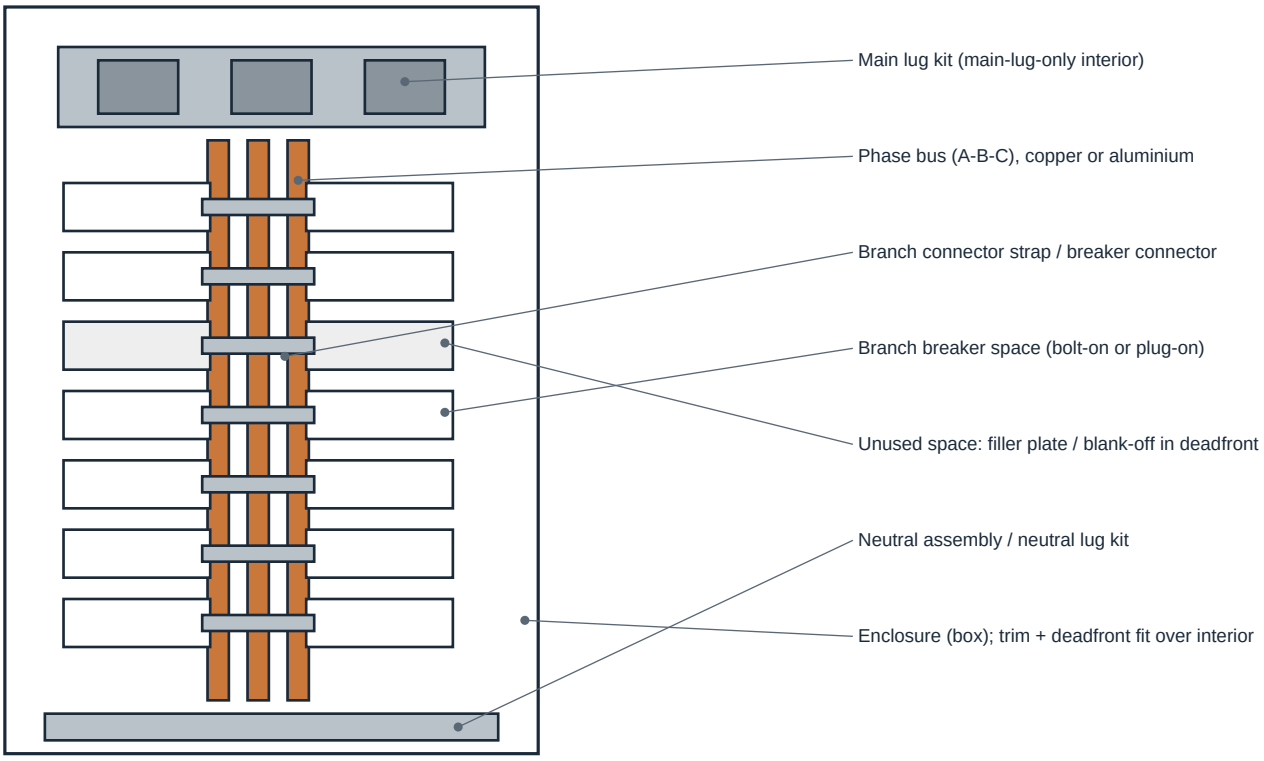
Safety and interchangeability notice

Matching dimensions do not establish electrical interchangeability. Panelboard and switchboard assemblies are listed as systems; substituting non-OEM or cross-manufacturer components may void the listing and short-circuit rating. Nothing in this catalogue states that a reproduced or aftermarket part is approved, listed or electrically equivalent unless an explicit, cited source says so. Distinguish OEM specifications from field measurements and manufacturing assumptions at all times.

2 Hardware Identification Guide

The drawings in this section are generic schematics prepared for this catalogue to illustrate terminology and measurement practice. They are not reproductions of manufacturer drawings and do not depict any specific OEM part.

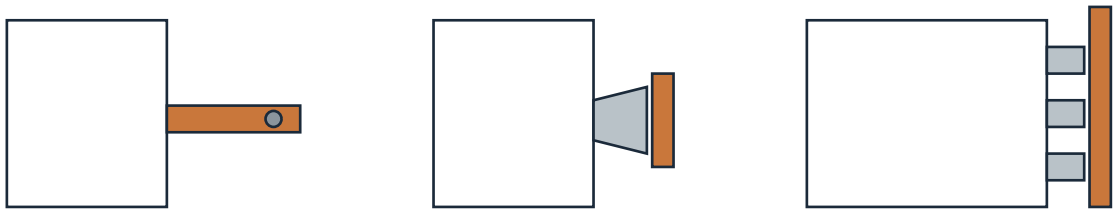
2.1 Anatomy of a panelboard interior



Generic schematic for orientation only — not an OEM drawing, not to scale

Figure 2-1. Generic panelboard interior showing where each component type installs.

2.2 Breaker mounting styles



Bolt-on: line terminal screws to bus / connector strap

Plug-on: jaw/clip engages bus stab

Plug-on panel/switchboard unit: jaws onto vertical bus stack

Generic schematics — mounting style is a first-level identification key

Figure 2-2. Bolt-on, plug-on and panel/switchboard plug-on unit mounting.

2.3 Branch connector straps — what to measure

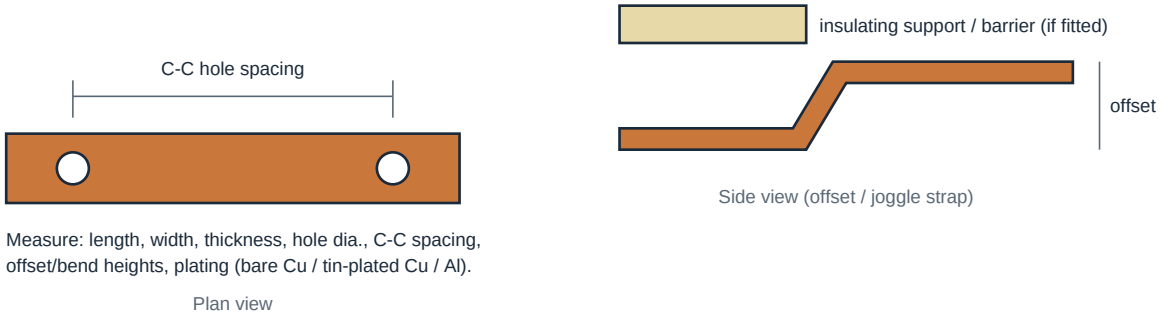


Figure 2-3. Measurement practice for connector straps and bus links.

2.4 Terminal lug types

3.2 CH-BR-RETRO — Eaton / Cutler-Hammer Type CH and Type BR panelboard retrofit kits (reuse of existing box)

FAM-EAT-027 · other · aka Lincoln Flex Center retrofit, RA/RB/RC/RD/RE/RAA retrofit kits, Retro Size A-E · markings: Cutler-Hammer, Eaton

Eaton/Cutler-Hammer standardized retrofit kits for re-using an existing (any-manufacturer, e.g. FPE or Zinsco) flush panel box: a cover assembly (field-drilled picture frame + trim) and a field-adjustable interior assembly with riser accommodating 4-6 in box depth (3.5-5.25 in for size AA). Kits are selected by existing box height into Retro Size groups A (21-30 in, cover 33x24), B (29-36, 40x24), C (34-41, 43x24), D (37-45, 47x24), E (45-54, 56x24), plus AA for boxes 14.5-20.5 in high (covers 19x13 or 21x16). Interiors are 'UL recognized under UL67'; whether the installed assembly in a foreign box is listed is debated (forum), so AHJ/field evaluation may be required. Hosted by InspectAPedia as an FPE Stab-Lok replacement option.

3.3 CDP — Westinghouse CDP / HCDP distribution panelboard

FAM-EAT-013 · panelboard · aka CDP, CDP/HCDP, CPD, Cutler-Hammer CDP, HCDP, Westinghouse CDP · markings: Cutler-Hammer, Westinghouse

Westinghouse distribution panelboard in 30-50 in wide boxes with chassis rails and vertical chassis bus, 3.50 in phase-to-phase bus centre-lines (switch kits). Series C retrofit kits (KCDP+breaker catalog no.) use same X space as original breakers; KD onto LB connectors requires TAD3 adapter.

Westinghouse distribution (circuit-breaker) panelboard on a chassis with vertical phase busbars at 3.50 in centers and mounting rails 19.50 in apart; X unit = 1.38 in. Boxes 30, 38, 42, 48 and 50 in wide; neutral in side gutter. Branch breakers mount on breaker mounting brackets with copper connectors to the chassis bus; unused space closed by filler covers (KCDP_X). Sumter supplies KCDP connector kits (connectors+brackets+covers+hardware), KCDP retrofit kits (breaker + connector kit) and -H hardware-only kits. Older 'LB' style connectors accept Series C K-frame with TAD3 adapter.

Evidence-only record for the existing Westinghouse CDP family. 1957 Westinghouse literature: CDP distribution panelboard uses E-M frame AB De-ion breakers 15-800 A with screw-driver convertibility; Vol 12 also lists a Cutler-Hammer-branded CDP on the time line and in the Cutler-Hammer replacement chart (E/EA/EH -> REH; EB/EHB -> EHD; F/FA/HF/HFA -> RHF/RHFA; up to N-frame -> ND), noting 'not rated for 100% rated breakers'. A 1946 Westinghouse 'AB De-ion Convertible' distribution panel is a plausible predecessor (unverified).

FAM-EAT-028 · panelboard · aka Challenger panelboard, PM4a, PM4b · markings: Challenger

Challenger Electrical Equipment (formed c.1981 from GTE-Sylvania's distribution business, Jackson MS) built distribution panelboards annotated 'PM4a' and 'PM4b' in relectric's catalogue. Mounting kits follow the pattern C<frame>D<n>K (twin) / C<frame>DS<n>K (single), with 'B' variants (e.g., CED4BK) annotated PM4b. Eaton-numbered KPRL4C*/KPRL4AC*/KPRL4BC* kits appear to adapt Challenger breakers into Pow-R-Line 4 style interiors. Coded EAT per lineage table.

3.8 FDP — Westinghouse FDP fusible distribution panelboard

FAM-EAT-014 · panelboard · aka FDP, Westinghouse FDP · markings: Westinghouse

Westinghouse fusible distribution panelboard (30-50 in wide). FDPW/FDPB switch connector kits KFDP* require 3.50 in bus spacing.

Westinghouse fusible distribution panelboard sharing CDP chassis geometry (3.50 in phase centers, 19.50 in rails). FDPW/FDPB switch connector kits fit only 3.50 in bus spacing; if bus spacing is 4.25 in no parts are available. Circuit breakers can be added to an FDP via a 'picture frame' transition (+2X).

Evidence-only record for the existing FDP family: 1957 ratings, and Eaton note that FDP retrofit kits fit only 3.50 in phase-to-phase vertical bus spacing - at 4.25 in spacing 'these retrofit kits will not fit and no parts are available'; 400-1200 A FDP connectors are not compatible with FDPW switches.

3.10 MP40 — Cutler-Hammer MP40 distribution panelboard

FAM-EAT-032 · panelboard · aka MP 40, MP-40, MP50 (dealer usage) · markings: Cutler-Hammer

Original Cutler-Hammer distribution (circuit-breaker) panelboard built after Cutler-Hammer entered the panelboard business (1962 Mullenbach purchase) and designed/listed for Westinghouse breakers under a supply agreement. Chassis uses 1.38 in X units, 26 in wide (30/38 in boxes in layout), 5 in side gutters, 6.50 in top/bottom gutters up to 400 A (12.0 in for 600-1600 A); standard box depth 10.50 in, 11.38 in for NC/HNC. Branch kits (MP40K-series) add a breaker with connectors, device cover and hardware; Eaton says MP40 kits also fit MP2 group-mounted switchboards, Cutler-Hammer-labelled CDP panelboards and 26.5-36 in wide NFB panelboards.

Westinghouse 1937-1988 lighting/appliance and distribution panelboards using E-family plug/bolt breakers. Branch breakers replaced by 'panelboard only' R-prefix breakers (REH, RHF, RHFA) supplied with mounting hardware; connector kits not available. FAM-EAT-024 · panelboard · aka NLAB, NLAB single row, NLAB-AB, NLAB-ABH, NLAB-LX, NPLAB, NQB, NQC, NQP · markings: Cutler-Hammer, Westinghouse

Westinghouse plug-in/bolt-on lighting panelboards for Quicklag-type Q breakers. Vol 12 flags 'connectors not available' for this group; replacement is a new PRL1a/PRL3a interior. CDP/FDP/NQB trim clamp 414A380G02 still applies to NQB.

Evidence-only record for the existing Westinghouse NLAB family: 1946 Westinghouse NOFUZE catalog lists NLAB Quicklag De-ion and NLAB single-row (column) panelboards; Vol 12 shows Cutler-Hammer also sold NLAB and NPLAB (QL / P breakers) with connectors not available and PRL1a as replacement. Note that GE also used the NLAB designation (TQ/TQC breakers) - see GEA NLAB.

3.21 PRL1A — Pow-R-Line 1a

FAM-EAT-001 · panelboard · aka POW-R-LINE 1A, PRL-1A, PRL1a, Pow-R-Line 1a · markings: Cutler-Hammer, Eaton

Cutler-Hammer/Eaton 240 Vac lighting & appliance panelboard on a 20 in wide box, neutral located in the side gutter. Branch QUICKLAG breakers mount horizontally on factory connector strips (bolt-on 1C96608 or plug-on 2C11642 assemblies); mains, sub-feed breakers and main/sub-feed/through-feed lugs mount vertically on KB/KL connector kits. Fully rated 10/22 kA, series rated to 200 kA at 240 Vac. Suitable for service entrance when specified (PRLSEB barrier kits, 4180B62 bonding jumper). Note: Eaton literature also uses the umbrella name 'Pow-R-Line C' for Series C breaker panelboards; that name is not unique to PRL1a and is also the name of the PRLC switchboard.

3.30 PRL4 — Pow-R-Line 4 (PRL4B breaker / PRL4F fusible / PRL4D drawout)

FAM-EAT-005 · panelboard · aka PRL-4, PRL4, PRL4B, PRL4D, PRL4F, PRL4X, Pow-R-Line 4, Pow-R-Line 4B, Pow-R-Line 4D, Pow-R-Line 4F · markings: Cutler-Hammer, Eaton, Westinghouse

Heavy distribution panelboard in 24, 36 or 44 in wide boxes (BX2457..BX4490), neutral in main gutter, vertical bus with branch devices horizontally mounted single or twin on KPRL4* connector kits measured in X units (1X = 1.38 in). Front is a vented cover assembly (two side rails, top/bottom vented covers, 6574C74) plus individual device covers and blank covers (6554C01/6554C02). Density-rated bus option required for some 100% rated breaker kits.

Westinghouse-origin power distribution panelboard (24, 36, 44 in box widths) that replaced CDP (PRL4B) and FDP (PRL4F). Its KPRL4 breaker connector kits (copper connectors, brackets, covers, hardware) are the most completely documented group-mount kits for Series C FD/JD/KD/LD/MDL/ND frames; included here because the same device X-spacing is used in Pow-R-Line C switchboard distribution chassis.

3.37 PRLC — Pow-R-Line C switchboard

FAM-EAT-017 · switchboard · aka POW-R-LINE C, PRL-C, Pow-R-Line C, Pow-R-Line C switchboard, Type 1 Pow-R-Line C · markings: Cutler-Hammer, Eaton, Westinghouse

Eaton (originally Westinghouse) Class II service-distribution switchboard, UL 891 / NEMA PB-2, front- or rear-access, with individually mounted mains and group-mounted feeder chassis. Evolved from the Westinghouse WF/WRP St. Louis switchboard when the design moved to Sumter SC and Visalia CA in 1988 with the introduction of Series C breakers. Distribution chassis are laid out in X units (1X = 1-3/8 in) on 38X or 50X vertical panel space in 36 in or 45 in wide structures; device X requirements (EHD 1-3X, FD 2-3X, JD 3X, KD 4X, LD/MDL/ND 6X) parallel the PRL4 panelboard chassis. Vol 12 states breaker provisions 'are available for all ratings of the Pow-R-Line C designs including all parts required to complete the cell', but no PRLC-specific provision kit catalog numbers were found in public documents (factory/Sumter quoted).
